PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building scalable, high-performance backend systems and secure REST APIs using Python3 and FastAPI across financial domains. Proficient in OOP, design patterns, microservices architecture, secure coding, unit/integration testing (pytest, JUnit concepts), and CI/CD pipelines. Strong understanding of SQL (PostgreSQL/Oracle-compatible), Agile/Scrum methodologies, and cross-functional collaboration. Currently deepening Java/Spring Boot expertise to complement Python-first background.

PROFESSIONAL EXPERIENCE

Python Backend Developer – Intern | Auburn Digital Solutions

Dec 2025 – Present

- Designed and developed ADS Finance, a production-grade financial management platform (Python/FastAPI) — covering full SDLC: system design, OOP-based modular architecture, coding, testing, and production support.
- Implemented microservices with design patterns (Factory, Repository, Middleware), JWT authentication, RBAC, and input validation — aligning with secure coding and resilient system design principles.
- Configured CI/CD pipelines, structured logging, and error monitoring for scalable, observable deployments across environments.
- Wrote comprehensive unit and integration tests using pytest, enforcing code quality via linting (flake8) and peer code reviews.

Software Developer – Intern | Kuhoo Finance

Feb 2025 – Nov 2025

- Built and deployed high-performance RESTful APIs using Python, Django & DRF — including a Task Management System and Loan Origination Service with optimised PostgreSQL queries and schema design.
- Delivered 900+ commits with robust unit/integration test coverage; resolved critical production bugs and managed merge requests to maintain production-grade code quality.
- Collaborated cross-functionally with engineering and product teams in Agile Scrum sprints — refining designs, estimating tasks, and shipping features in frequent releases.
- Optimised CI/CD workflows resulting in measurable improvements in deployment speed and system reliability.

KEY PROJECTS

ADS Finance – Financial Management Platform — Python · FastAPI · PostgreSQL · Microservices · Docker · CI/CD

- Production-grade financial platform with microservices architecture, JWT auth, RBAC, observability, and end-to-end test coverage — directly aligned with Barclays' scalable, secure system requirements.

Task Management System — Python · Django · DRF · PostgreSQL · RBAC · pytest

- Jira-style workflow tracker with full task lifecycle (To-Do → In Progress → Done), RBAC, user assignment, and priority tagging — demonstrating OOP, design patterns, and SQL schema design.

LocalGPT – Private AI Document Assistant — Python · HuggingFace LLMs · RAG · ChromaDB · REST API

- Fully offline AI assistant using RAG architecture and vector search — demonstrates advanced Python and system design skills.

TECHNICAL SKILLS

Languages: Python3, Java (working knowledge), SQL (PostgreSQL, MySQL, Oracle-compatible PL/SQL), HTML/CSS

Frameworks & Tools: FastAPI, Django, DRF, Flask, Spring Boot (learning), pytest, Docker, Git/GitHub/GitLab, Postman, RabbitMQ

Architecture & Design: Microservices, OOP, Design Patterns (Factory, Repository, Middleware), REST APIs, Secure Coding, JVM basics

DevOps & Agile: CI/CD, Structured Logging, Observability, Scrum, Sprint Planning, Jira, Code Review, Cross-functional Collaboration

Security & Testing: JWT, RBAC, Input Validation, Unit/Integration Testing, TDD principles, Linting (flake8)

EDUCATION

Master of Computer Applications (MCA)

2023 – 2025

MIT World Peace University, Pune, Maharashtra
