Summary

Software Engineer with production experience building Python backend services and REST APIs across fintech and AI-driven products. Comfortable owning a feature end-to-end – API design, PostgreSQL data modeling, authentication, and Docker/Kubernetes deployment. Works in Agile/Scrum teams, with regular code review and cross-functional collaboration with product and QA.

Experience

Omnicom Group *May 2026 – Present*

Software Engineer · via TheCodeStory

- Built the authentication system and a unified document parser for DocLens spanning 8 formats (PDF, DOCX, XLSX, CSV, TXT, JSON, XML, HTML), replacing separate per-format handlers with a single parsing interface.
- Architecting a FastAPI + React platform that crawls client websites, indexes pages into a ChromaDB vector store, and answers content questions with source citations, plus duplicate- and content-gap detection.
- Collaborate with product and engineering stakeholders through Git-based code review and Agile sprint cycles.

Auburn Digital Solutions *Dec 2025 – Apr 2026*

Software Developer Intern

- Built backend modules for a multi-level financial approval workflow (FastAPI, PostgreSQL, JWT, RBAC) covering estimate, purchase order, and release order approval chains.
- Containerized the service with Docker and added pytest coverage and structured logging, making it CI/CD-ready.

Kuhoo Finance Pvt Ltd *Feb 2025 – Nov 2025*

SDE Intern

- Raised automated test coverage to 87% across six core services (Loan Origination, Authentication, Document, Payment, Decision Engine, MDM), strengthening CI quality gates.
- Built a Django/DRF task management system (PostgreSQL, JWT, RBAC) with task lifecycle management and REST APIs, later containerized with Docker and Kubernetes manifests.
- Replaced hardcoded frontend filters in the Document Service with backend-driven filters and post-disbursement workflows.

Projects

TaskFlow — Task Management System

Python, Django, DRF, PostgreSQL, JWT, Docker, Kubernetes

- Designed a REST API and PostgreSQL schema for multi-tenant organizations, projects, sprints, and Kanban-style task tracking, with JWT authentication and role-based access control.
- Containerized the service with Docker and wrote Kubernetes deployment manifests for repeatable deployment.

Stock Data Intelligence Dashboard

Python, FastAPI, Pandas, NumPy, Docker

- Built a data pipeline ingesting live market data with a fallback source for 10 companies, exposing 8 REST endpoints (FastAPI, Swagger/OpenAPI) for returns, moving averages, and volatility metrics.

Education

MIT World Peace University, Pune *2023 – 2025*

Master of Computer Applications (MCA), CGPA: 7.81

Skills

Languages: Python, JavaScript, C++, SQL, HTML/CSS
Backend: FastAPI, Django, Django REST Framework, Flask, REST APIs, Microservices, JWT, RBAC, OOP & Design Patterns
Databases: PostgreSQL, MySQL, SQLite, ChromaDB
DevOps: Docker, Kubernetes, Git, GitHub, CI/CD, pytest
AI/LLM: RAG, LLM Integration, Prompt Engineering, LangChain
Practices: Agile/Scrum, System Design, Data Structures & Algorithms, Code Review, Unit & Integration Testing
